Education

De La Salle University - Manila

BS Computer Science, Major in Software Technology

CGPA: 3.941 / 4.000

Expected August 2027

- Consistent First Honors Dean's Lister; Summa Cum Laude standing
- Aboitiz Future Leaders Scholar (1 of 10 selected); DOST-SEI Merit Scholar

Work Experience

Fuller Focus (Foundry for Good)

May 2026 - Present

AI Engineer Intern

- Built a nonprofit web-research workflow spanning crawling, structured extraction, evidence validation, APIs, and React interfaces to help sales teams identify and qualify prospects.
- Developed multi-page contact discovery with staff-page probing, email validation, deduplication, and source checks to extract reliable contact information from varied nonprofit websites.
- Implemented durable asynchronous research jobs with persisted results, retries, timeouts, cancellation, and partial-failure handling; dispatched production workers through Google Cloud Run Jobs.
- Benchmarked 3 LLM variants across 36 organization/model runs on extraction quality, latency, and estimated cost to select models for nonprofit contact discovery based on measured tradeoffs.
- Added SSRF-safe fetching, redirect checks, and organization-identity validation to protect web-research boundaries; validated source domains and built diagnostics exports that avoid exposing secrets.

Aboitiz Foods

February 2026 - April 2026

Software Engineer Intern

- Worked with legal and procurement stakeholders across multiple countries to build Agreemate, a React/NestJS contract platform covering review, execution, expiry, and renewal workflows.
- Automated DOCX contract generation and synchronized per-user access with Google Drive; used database transactions and rollback cleanup to keep document and workflow operations consistent.
- Reduced repeated Google Sheets calls through bulk catalog reads, caching, and in-memory filtering; consolidated valid order lines into one batched write regardless of line-item count.
- Implemented parallel legal and department reviews, country-based lawyer assignment, and re-review after counterparty feedback, with immutable version and action histories for traceability.

Bids n Buys

February 2025 - July 2025

Blockchain Developer Intern | Junior Blockchain Developer (Promoted)

- Built a serverless TypeScript invoicing API on AWS Lambda and a MongoDB-backed crypto funding workflow; developed an Angular wallet with Jest unit tests and Cypress end-to-end tests.
- Created a Merkle-proof verification system that submitted hashes to Cardano for integrity verification; managed Linux-based Cardano nodes with Docker Swarm and repeatable scripts.

Selected Projects

WESM Price Prediction | *Machine Learning Project* | *Python, scikit-learn, PyTorch*

- Built an electricity-market ML pipeline and benchmarked five model families for price prediction and spike detection; best models achieved approximately PHP 930/MWh RMSE and 0.947 ROC-AUC.

JJ Apartments | *Academic Client Project* | *Next.js, Spring Boot, MySQL*

- Led a 7-member Agile team building a property-management app for a real client, coordinating sprint planning and priorities; built GitHub Actions CI/CD and deployed services through Vercel and Render.

IMDb Distributed Database | *MySQL, Python, Flask, Docker*

- Built a three-node MySQL database with horizontal fragmentation, replication, concurrency control, and failure recovery; used Flask and Docker to manage approximately 40,000+ IMDb records.

Technical Skills

Languages: Python, TypeScript/JavaScript, SQL, Java

Web & Data: React, Next.js, NestJS, FastAPI, REST APIs, asyncio, HTTPX, MySQL, MongoDB, SQLite

AI & ML: Anthropic API, Gemini API, Amazon Bedrock, PyTorch, scikit-learn

Tools: Git, Docker, Google Cloud Run, AWS Lambda, GitHub Actions, pytest, Cypress, Playwright
